

Tape Wound CTs

Tape wound current transformers are traditional Current transformers, which were commonly used before polycarbonate casing CTs were introduced. Now after introduction of our various other series of CTs like RW series, RT Series, SR and TB series, we are now manufacturing these tape wound CTs in limited manner. Generally higher ranges above 1000A are manufactured in tape wound. But we can manufacture Tape wound Current Transformers from 30A to 5000A.
